

Medeco XT Electronic Locking System

Access Control

Features & Benefits

Controlled Access

Keys are electronically programmed to open only specific locks during a designated schedule. Schedules may also contain an expiration point to completely disable the key until it is audited and reprogrammed.

Accountability

Audit information recorded in both the lock and key shows a time-and-date stamped record of every event, including authorized accesses and unauthorized attempts.

Electronic Rekeying & Scheduling

Respond quickly to security threats, lost or stolen keys, or personnel changes without the added cost of changing your locks and keys.

Easy Installation

Medeco XT keys provide all power to the cylinder, eliminating the need for any hard wiring or power supply. Simply remove the existing mechanical cylinder and install the Medeco XT cylinder.

Physical Security

Medeco XT products add a wide variety of intelligent features without compromising on physical security. Attack-resistant design and tamper-proof features provide strong protection against forced entry.

Efficient System Management

Medeco XT software contains tools that will help you manage your security more efficiently. Flexible programming, scheduled access and full audit reports are offered with the convenience of stand-alone or web-based software.

Unlimited Applications

Medeco XT cylinders are available to fit nearly any application or hardware type for enhanced security and accountability.

Programmable Keys. System Management Software.

The Medeco Solution

How Does it Work?

The XT system works like a basic access control system. Keys are programmed to operate specific locks during a set schedule and then assigned to a user. Once the key is past its schedule, the user can no longer open any locks.

Schedules also contain a date range which can be set from one date to one year. As the key is used throughout its schedule, every access and unauthorized attempt is recorded in the key and lock, then uploaded to the software when the key is resynchronized.

The captured (audit) data is then used to generate reports showing where and when the key was used. Exception reports can be generated to identify questionable activities that may require further investigation; such as unauthorized attempted openings after hours or in unauthorized areas. If a key is misplaced or stolen, the locks can be electronically updated to deny access, eliminating the cost re-keying traditional locks.

The lock itself is plug-and-play. All power for the lock is provided by the key, so there is no need for hard-wiring. Simply remove the mechanical lock, replace it with a XT lock, and your system is ready to use.

Medeco XT is a pure electronic master key system providing Controlled Access, Accountability, Physical Security and effective System Management. More than just a way to protect your property, equipment and assets, Medeco XT is also a business tool that can lead to a substantial return on investment.
